		<p>The above standards shall apply from January 1, 2024 (From one year prior to the effective date). The following thresholds shall apply from January 1, 2026 (From one year prior to the effective date). • 0.005% by weights(50ppm) of total organic fluorine in material</p>						

Notes:

(1) Intentionally added:

Intentionally added means that the corresponding substance or compound including the corresponding substance is intentionally added during manufacturing process, etc., irrespective of quantity. Ordinary impurities do not fall under this category. The substance, for which "Intentionally added" is written in its threshold field, must not be intentionally added.

(2) Regulatory thresholds for substances in these applications are based on emission or exposure limits rather than the concentration in the product. The regulatory limit is:

Radioactive substances -a dose rate exceeding 1 µSv h⁻¹ at a distance of 0,1 m

Because emission and exposure levels cannot be derived from actual concentration, a threshold level of "intentionally added" is indicated for reporting. Suppliers may choose to report a default concentration of 0.1% by weight in the product for these substances, in lieu of determining the exact concentrations in their products, to indicate that the substance is known to be present in their product, as the actual concentration in the product is not informative for regulatory compliance assessment.

(3) The European Community's ban applies to azocolourants and azodyes that by reductive cleavage of azo groups may release one of the 22 aromatic amines listed. The threshold level given applies to these amines, not to the azocolourants and azodyes.

(4) HBCD is also referred to as HBCDD. HBCD and HBCDD are the same substance.

(5) Regulatory thresholds for substances in these applications are based on emission limits.

- Hardwood plywood (made with a veneer core or a composite core) – 0.05 ppm
- Medium-density fiberboard (MDF) – 0.11ppm
- Thin MDF – 0.13ppm
- Particleboard – 0.09ppm

- (6) However, the use of arsenic is conditionally permitted when their substitutions are not available currently because of material technology and they are technically and scientifically essential to maintain the optical performance required in product designing.
- (7) PFOA related substances refer to substances (including its salts and polymers) having a linear or branched perfluoroheptyl group with the formula C₇F₁₅- or perfluorooctyl group with the formula C₈F₁₇- , as one of the structural elements. The following substances are excluded.
- C₈F₁₇-X, where X= F, Cl, Br.

 - Perfluorooctane sulfonic acid and its derivatives (PFOS), as listed in Annex I of POPs Regulation.
- (8) When PFOAs are contained in mixtures applied to the article, we have determined that the denominator for calculating the concentration may be the total mass of articles and mixtures (after volatilization / after reaction) with reference to "Guidance on requirements for substances in articles" issued by ECHA. However, this interpretation may be changed due to revisions of laws and regulations.
- (9) For equipments used to manufacture semi-conductors, latex printing inks, and medical devices other than implantable medical devices, which were allowed to be excluded for a certain period of time, the exclusion deadline has changed as follows due to the shift from REACH Regulation to POPs Regulation.
- latex printing inks; until 3 Dec 2020
 - medical devices other than implantable ones, within the scope of Regulation (EU) 2017/745; until 3 Dec 2020.
 - equipments used to manufacture semi-conductors; no exclusion
- (10) This PBDEs refer to tetra BDE (tetrabromodiphenyl ether), penta BDE, hexa BDE, hepta BDE, and deca BDE.
- (11) "ANNEX XVII Entry 63 of REACH Regulation (EC) No 1907/2006" shall not apply to the following articles. (Refer to the Official Journal of the European Union / COMMISSION REGULATION (EU) 2015/628 for more information.)
- (1) Articles placed on the market for the first time before 1 June 2016
 - (2) Articles within the scope of Directive 2011/65/EU of the European Parliament and of the Council

Annex 1. Applications exempted from the RoHS Directive Annex III

The following table lists the applications exempted from the RoHS Directive as of October 1, 2023. As a principle, these applications are exempted from Section I-1, "Prohibited Chemical Substances". In principle, the prohibited dates of delivery to Nikon Group will be six months before the expiration dates of exemption.

However, the Annex of RoHS Directive is subject to continual revision, make sure to check the European Commission website for the latest information.

Notes:

- (1) A laminated printed wiring board refers to the layered board materials excluding surface finishing and components
- (2) Intentionally added: It means that the corresponding substance or compound including the corresponding substance is intentionally added during manufacturing process, etc., irrespective of quantity.
Ordinary impurities do not fall under this category.
The substance, for which "Intentionally added" is written in its threshold field, must not be intentionally added.
- (3) Regulatory thresholds for substances in these applications are based on emission or exposure limits rather than on the concentration in the product. The regulatory limits are:
 - Nickel released from the parts coming into direct and prolonged contact with the skin : 0,5 µg/cm²/week
(Based on DIN EN 1811)Because emission and exposure levels cannot be derived from actual concentrations, a threshold level of "intentionally added" is indicated for reporting. Suppliers may choose to report a default concentration of 0.1% by weight in the product for these substances, in lieu of determining the exact concentrations in their products, to indicate that the substance is known to be present in their product, as the actual concentration in the product is not informative for regulatory compliance assessment.
- (4) Nickel must be reported in certain regulated applications where it is likely to result in prolonged skin exposure (e.g., an outer enclosure for a portable electronic product designed to be carried). Use of nickel or nickel contained in components and parts designed to be located inside the outer enclosure of a product need not be reported.
- (5) According to the judgement of European Court of Justice on September 2015, in principle the denominator of the threshold (control value) would be a part or material constituting the product.
- (6) CAS number of these substances is not disclosed due to CBI (confidential business information).

I-2-(2) SVHCs of REACH Regulation

SVHCs of REACH Regulation are subject to continual addition, and suppliers should be responsible for always ensuring that they refer to the latest version. The following table lists the SVHCs as of October 1, 2023. Refer to the following ECHA website for the latest SVHCs information.

<https://echa.europa.eu/candidate-list-table>

Besides, some of SVHCs are defined to be the “prohibited chemical substances”. Refer to the list of Section I-1. “Prohibited Chemical Substances” for the substances marked as “PCS” in the remarks column of the following list.

Notes:

- (1) Alkanes, C10-13, chloro (Short Chain Chlorinated Paraffins) is abbreviated to SCCPs. Here, the short chain corresponds to carbon number 10 to 13 (as the medium chain and long chain correspond to carbon number 14 to 19 and 20 to 30, respectively). SCCPs are a persistent and high-bioaccumulative substance used for various purposes because it has flame retardant properties, plasticity, lubricating properties in metallic processing, and hydrophobicity.
- (2) Refractory Ceramic Fibers, Zirconia Aluminiumsilicate are fibers covered by index number 650-017-00-8 in Annex VI, part 3, table 3.1 of Regulation (EC) No 1272/2008 of the European Parliament and of the Council of December 16, 2008 on classification, labelling and packaging of substances and mixtures, and fulfil the three following conditions:
 - a) oxides of aluminium and silicon are the main components present (in the fibers) within variable concentration ranges
 - b) fibers have a length weighted geometric mean diameter less two standard geometric errors of 6 or less micrometres (μm)
 - c) alkaline oxide and alkali earth oxide ($\text{Na}_2\text{O}+\text{K}_2\text{O}+\text{CaO}+\text{MgO}+\text{BaO}$) content less or equal to 18% by weight
